Maximum Operating Limits												
Operating Pressure T Tape Wrapped	emperature	Pressure Drop	Feed Flow	Chlorine Concentratio	Feedwater on SDI (15min)	Feedwater Turbidity						
300 psi (20,7 bar)	113 °F <i>(4</i> 5 °C)	10 psi (0,7 bar)	16 gpm <i>(3,6 m³/h)</i>	<0,1 ppm	5,0	1,0 NTU						
Other Operating Limits			Feedwate pH	r	Minimum ratio of concentrate to permeate flow for any element							
			3,0 ÷ 10,0		5:1							

The limitations shown in Operating Limits are for general use. The values may be more conservative for specific projects to ensure the best performance and longest life of the membrane.

Notice: Permeate flow for individual elements may vary + or -15 percent. Elements are vacuum sealed in a polyethylene bag containing less than 1.0% sodium meta-bisulfite.

Guidelines: Permeate obtained from first hour of operation should be discarded.

Avoid static permeate-side backpressure at all times.

OLTREMARE

These membranes may be subject to drinking water application restrictions in some countries: please check the application status before use and sale.

For element loading use only glycerine to lubricate o-rings and brine seal.

The customer is fully responsible for the effects of incompatible chemicals on elements. The presence of free chlorine and other oxidizing agents will cause membrane failure, the damage is not covered under warranty. Oltremare believes the information and data contained herein to be accurate and useful. The information and data are offered in good
